LILETTA® — YOUR LIFE.
YOUR JOURNEY.
YOUR CHOICE.

UP TO 8 YEARS
OF PREGNANCY PREVENTION

Ask your doctor if LILETTA may be right for you

Lilettad (levonorgestrel-releasing intrauterine system) 52 mg

INDICATION
LILETTA® (levonorgestrel-releasing intrauterine system) 52 mg is a hormone-releasing system placed in your uterus to prevent pregnancy for as long as you want for up to 8 years.

Please see Important Risk Information throughout and click here for the Consumer Brief Summary.
WHAT IS LILETTA®?

LILETTA is an intrauterine system (IUS, otherwise known as an intrauterine device, or IUD) that is inserted into the uterus by a healthcare provider to prevent pregnancy. LILETTA is proven to be approximately 99% effective in preventing pregnancy for up to 8 years.

LILETTA is small and flexible

LILETTA is a small, flexible, plastic, T-shaped device. When placed in the uterus, it slowly releases a progestin hormone called levonorgestrel—the same kind of hormone that is often used in birth control pills.

Two thin threads are attached to the stem (lower end) of LILETTA. The threads are the only part of LILETTA you should feel when it is in your uterus; however, unlike a tampon string, the threads do not extend outside your body.

IMPORTANT RISK INFORMATION

• Do not use LILETTA if you:
  – Are or might be pregnant; LILETTA cannot be used as an emergency contraceptive
  – Have a serious pelvic infection called pelvic inflammatory disease (PID); PID occurs in less than 1% of users
  – Have an untreated lower genital infection now
  – Have had a serious pelvic infection after an abortion or pregnancy within the last 3 months

HOW EFFECTIVE IS LILETTA®?

~99% effective in preventing pregnancy for up to 8 years

LILETTA has been found to be approximately 99% effective at preventing pregnancy for up to 8 years in different types of women of childbearing age. It can be used by women who have had children and women who have never been pregnant.

When can LILETTA be inserted?

• LILETTA can be inserted during an in-office visit
• It can be inserted whether you are currently using another form of birth control, like the pill, or not using anything at all
• Insertion is performed by your healthcare provider

You may experience pain, bleeding, or dizziness during and after insertion. If your symptoms do not pass within 30 minutes after insertion, LILETTA may not have been placed correctly. Your healthcare provider will examine you to see if LILETTA needs to be removed or replaced.

A backup birth control method, such as condoms, may need to be used for 7 days after LILETTA insertion to prevent pregnancy.
MORE PREGNANCIES

FEWER PREGNANCIES

- 85 OR MORE PREGNANCIES PER 100 WOMEN IN 1 YEAR
- 10-20 PREGNANCIES PER 100 WOMEN IN 1 YEAR
- FEWER THAN 1 PREGNANCY PER 100 WOMEN IN 1 YEAR

**BIRTH CONTROL METHODS BASED ON PREGNANCIES PER YEAR**

**FEWER PREGNANCIES**

- INTRAUTERINE DEVICES
- IMPLANTS
- STERILIZATION
- INJECTIONS
- SKIN PATCH
- VAGINAL RING WITH HORMONES
- DIAPHRAGM
- BIRTH CONTROL PILLS
- CONDOMS
- WITHDRAWAL SPONGE
- NO SEX DURING MOST FERTILE DAYS OF MONTHLY CYCLE
- VAGINAL RING WITH HORMONES
- SPERMICIDE
- NO BIRTH CONTROL

**MORE PREGNANCIES**

**IMPORTANT RISK INFORMATION (continued)**

- Do not use LILETTA if you: (continued)
  - Can get infections easily; for example, if you:
    - Have problems with your immune system
    - Have multiple sexual partners or your partner has multiple sexual partners
    - Have a history of PID
  - Have or suspect you might have cancer of the uterus or cervix
  - Have bleeding from the vagina that has not been explained
  - Have short-term (acute) liver disease or liver tumor

Please see Important Risk Information throughout and click [here](#) for the Consumer Brief Summary.
HOW DOES LILETTA® WORK?

LILETTA may work in several ways, including:

- Thickening cervical mucus
- Inhibiting sperm movement
- Reducing sperm survival
- Thinning the lining of your uterus

It is not known exactly how these actions work together to prevent pregnancy.

IMPORTANT RISK INFORMATION (continued)

- Do not use LILETTA if you: (continued)
  - Have breast cancer or any other cancer that is sensitive to progestin (a female hormone), now or in the past
  - Have an intrauterine contraceptive system (IUS) in your uterus already
  - Have a condition of the uterus that changes the shape of the uterine cavity, such as large fibroid tumors
  - Are allergic to levonorgestrel, silicone, polyethylene, or barium sulfate

Please see Important Risk Information throughout and click here for the Consumer Brief Summary.
After LILETTA is placed

After LILETTA is placed, your healthcare provider will explain how you can check the threads, once a month, to make sure LILETTA is still in place. You may need to return to your healthcare provider for a follow-up appointment 4 to 6 weeks after placement and for routine visits thereafter, when your healthcare professional will make sure that LILETTA is in the right position.

TO LEARN MORE, VISIT LILETTA.COM

WILL IT AFFECT MY PERIOD?

For the first 3 to 6 months, your period may become a little unpredictable and you may bleed more than usual. You may also have frequent spotting or light bleeding and cramping. Some women have heavy bleeding during this time. After you have used LILETTA for a while, the number of days you experience bleeding and spotting is likely to lessen. For some women, menstrual periods may stop altogether. When LILETTA is removed, your menstrual periods will likely return to their former pattern.

If you have any concerns that you may be pregnant while using LILETTA, call your healthcare provider and, if possible, also do a urine pregnancy test.

WILL MY PARTNER FEEL IT DURING SEX?

LILETTA should not be felt during sexual intercourse because it’s placed in the uterus, not the vagina. However, there is a chance that male partners may feel the threads. If this occurs, or if you or your partner experience pain during sex, talk with your healthcare provider.

IMPORTANT RISK INFORMATION (continued)

- Life-threatening infection can occur within the first few days after LILETTA is placed. Call your healthcare provider immediately if you develop severe pain or fever shortly after LILETTA is placed.

Please see Important Risk Information throughout and click here for the Consumer Brief Summary.

LILETTA® is a reversible type of birth control

You can stop using LILETTA at any time by asking your healthcare provider to remove it. You could become pregnant as soon as LILETTA is removed. About 5 out of 6 women who want to become pregnant will become pregnant sometime in the first year after LILETTA is removed.

If you do not wish to become pregnant, you should use another method of birth control as soon as LILETTA is removed. Talk to your healthcare provider about the best birth control methods for you, because your new method may need to be started 7 days before LILETTA is removed to prevent pregnancy.

YOUR JOURNEY. YOUR CHOICE.

ASK YOUR DOCTOR IF LILETTA IS RIGHT FOR YOU

IMPORTANT RISK INFORMATION (continued)

- Some IUS users get a serious pelvic infection called pelvic inflammatory disease (PID) or endometritis. These may be sexually transmitted. You have a higher chance of getting PID or endometritis if you or your partner has sex with other partners. PID or endometritis can cause serious problems such as infertility, ectopic pregnancy, or pelvic pain that does not go away. More serious cases of PID or endometritis may require surgery. Removal of the uterus (hysterectomy) is sometimes needed. In rare cases, infections that start as PID or endometritis can even cause death. Tell your healthcare provider right away if you have any of these signs of PID or endometritis: long-lasting or heavy bleeding, unusual or foul-smelling vaginal discharge, low abdominal or pelvic pain, painful sex, genital lesions or sores, chills, or fever.
TALK TO YOUR HEALTHCARE PROVIDER

While you’re considering LILETTA® as your method of birth control, you and your healthcare provider should discuss your health in general.

When speaking with your healthcare provider, it’s important that you mention:

- Any heart problems you have or have had
- If you’ve had a baby recently or are breastfeeding
- Any medicines you’re taking, including prescription and over-the-counter medicines, vitamins, and herbal supplements
- If you have any sexually transmitted diseases (STDs) or sexually transmitted infections (STIs)

A UNIQUE COLLABORATION

AbbVie (the maker of LILETTA®) has a groundbreaking partnership with Medicines360®, a nonprofit women’s health pharmaceutical company, to expand access to LILETTA, regardless of income or insurance coverage.

- AbbVie is investing in innovative programs and solutions that facilitate access in both public and private sectors
- Medicines360 invests its proceeds in advocacy, education, and additional product and partnership development to further its mission in the U.S. and globally

For more information about LILETTA, visit LILETTA.com or call 1-855-LILETTA (1.855.545.3882)

IMPORTANT RISK INFORMATION (continued)

- LILETTA may partially go into (become embedded) or go completely through (perforate) the wall of the uterus. If perforation occurs, LILETTA may move outside the uterus and can cause internal scarring, infection, or damage to other organs. You may need surgery to have LILETTA removed if it is embedded or perforation occurs. Risk of perforation is increased in breastfeeding women

Please see Important Risk Information throughout and click here for the Consumer Brief Summary.
INDICATION
LILETTA® (levonorgestrel-releasing intrauterine system) 52 mg is a hormone-releasing system placed in your uterus to prevent pregnancy for as long as you want for up to 8 years.

IMPORTANT RISK INFORMATION (continued)
• LILETTA may come out of your uterus (expulsion). Expulsion occurs in about 4 out of 100 women, most often in the first year of use. You may become pregnant if LILETTA comes out. If you think that LILETTA has come out, use another birth control method like condoms or do not have sex (vaginal intercourse) until you are seen by a healthcare provider

• Ovarian cysts may occur but usually disappear

**LILETTA does not protect against HIV or STDs.**

Available by prescription only.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.

If you are having difficulty paying for your medicine, AbbVie may be able to help. Visit AbbVie.com/myAbbVieAssist to learn more.
